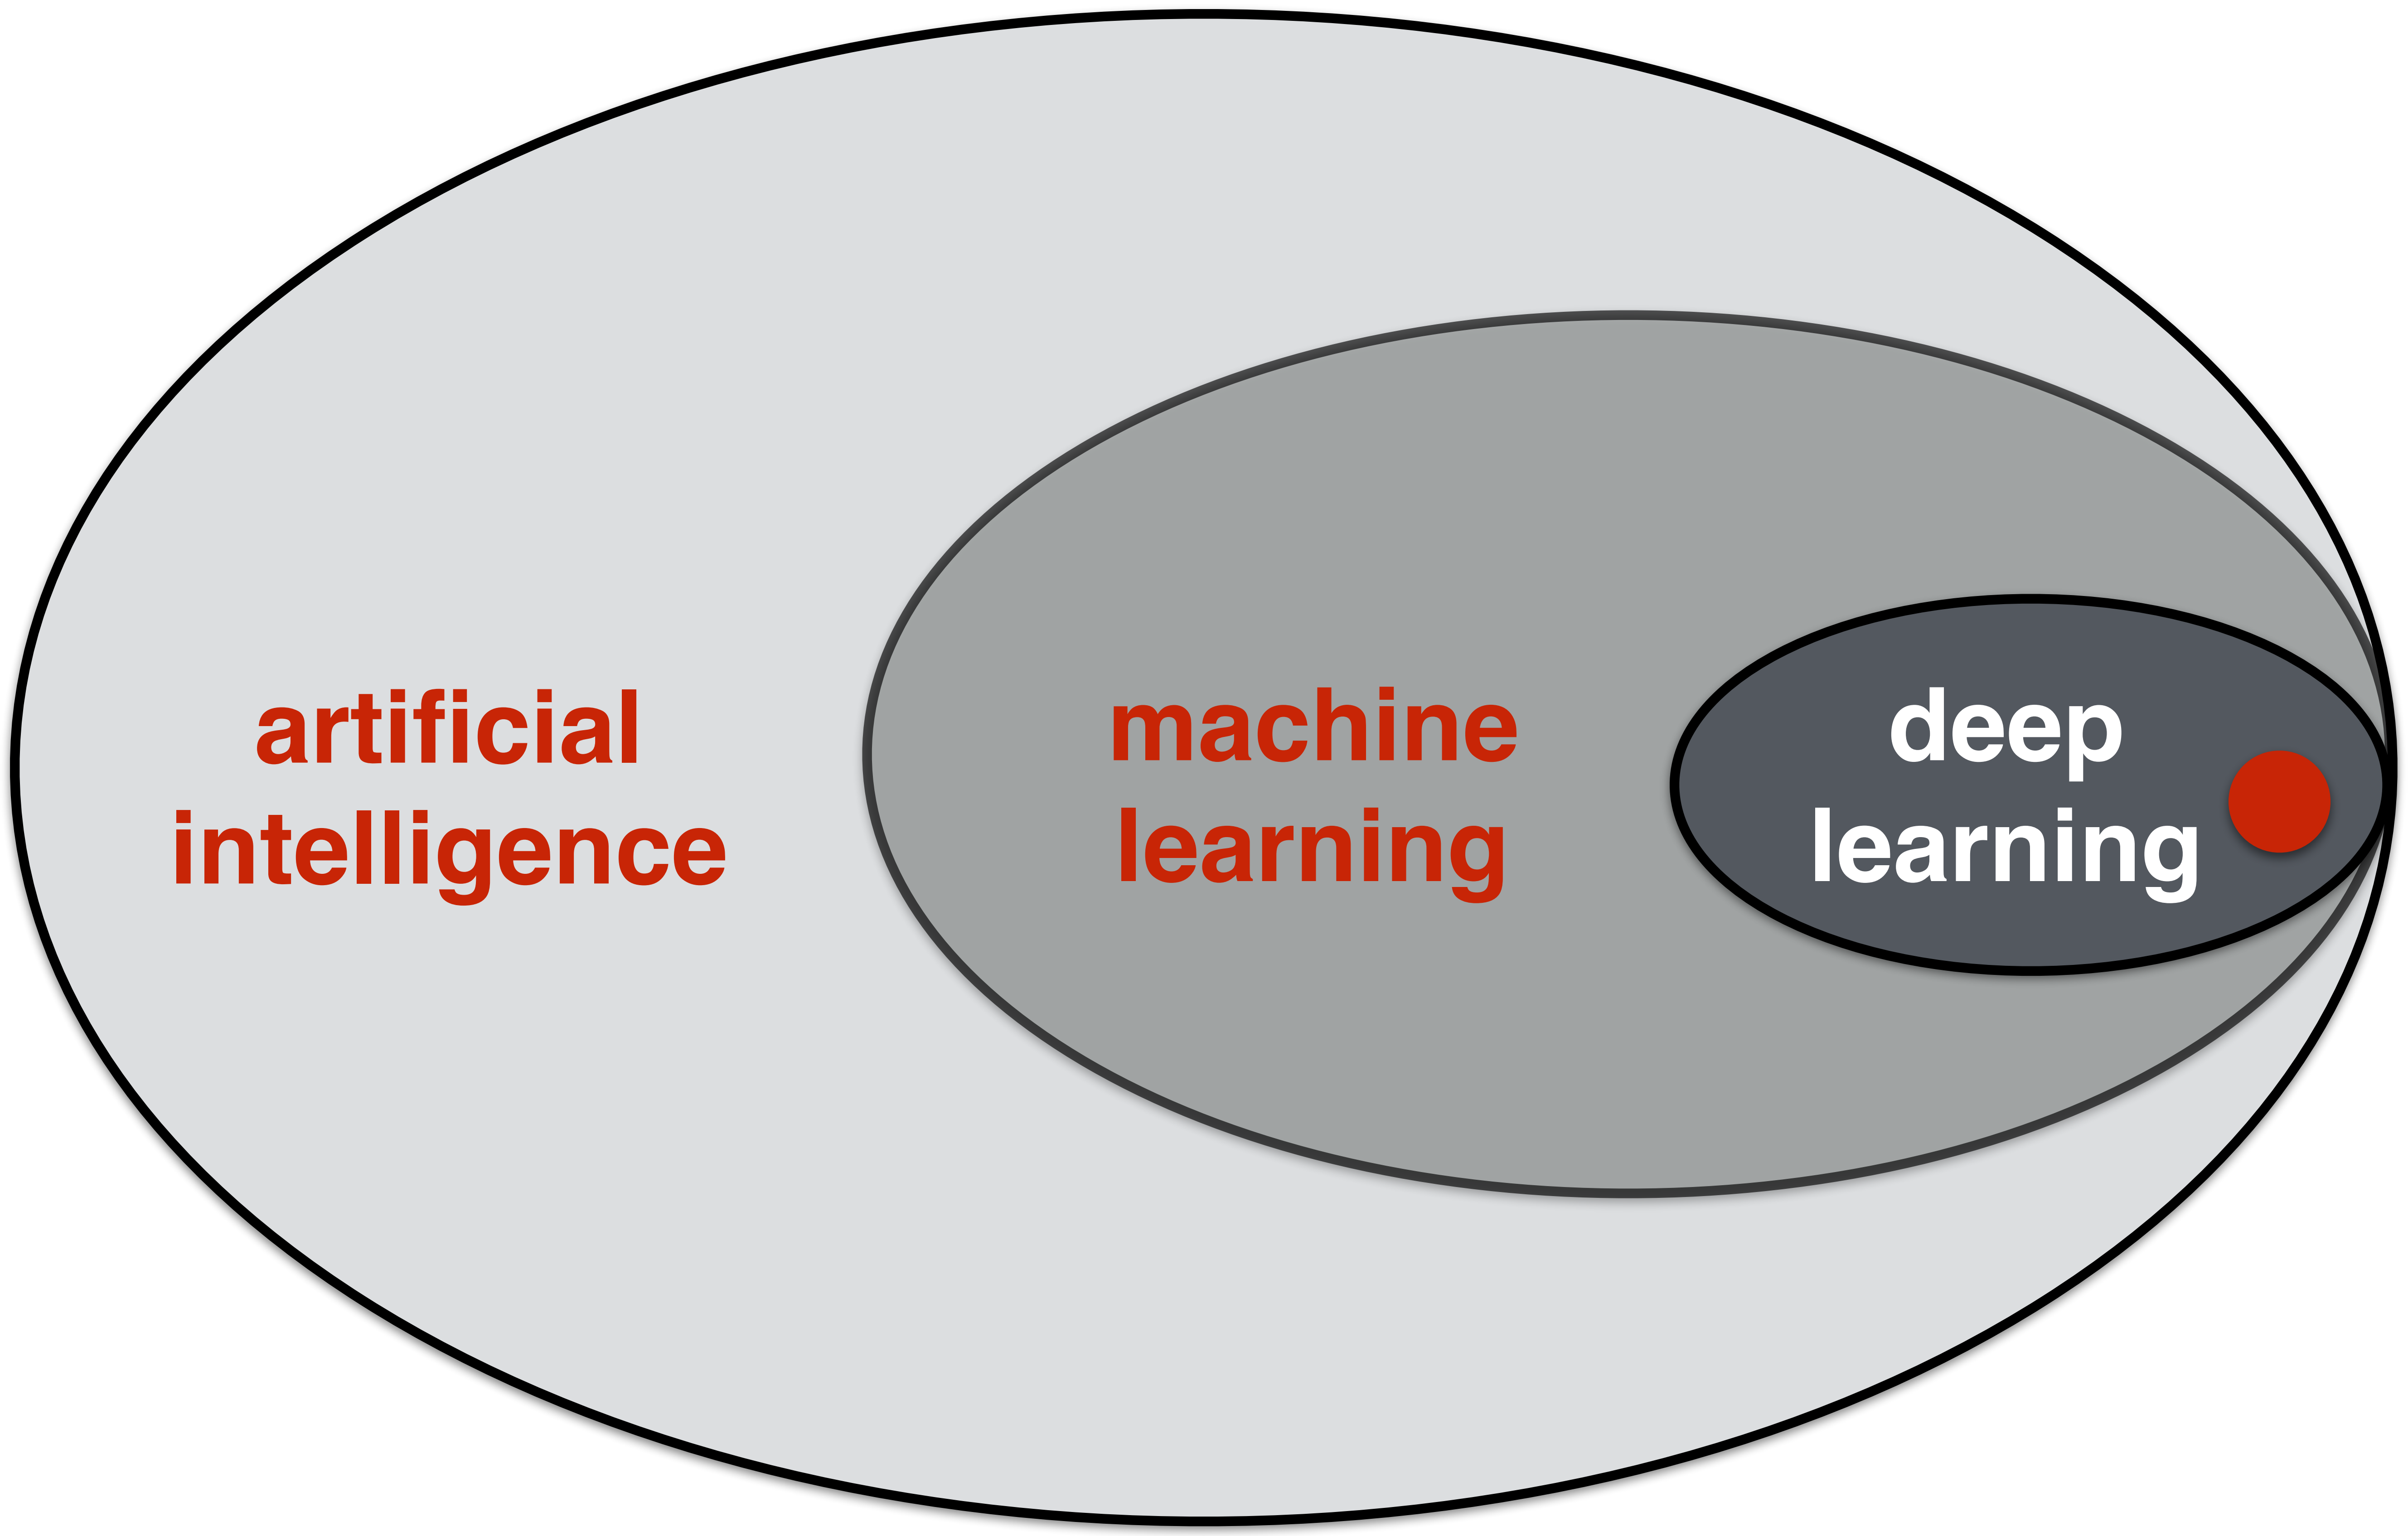
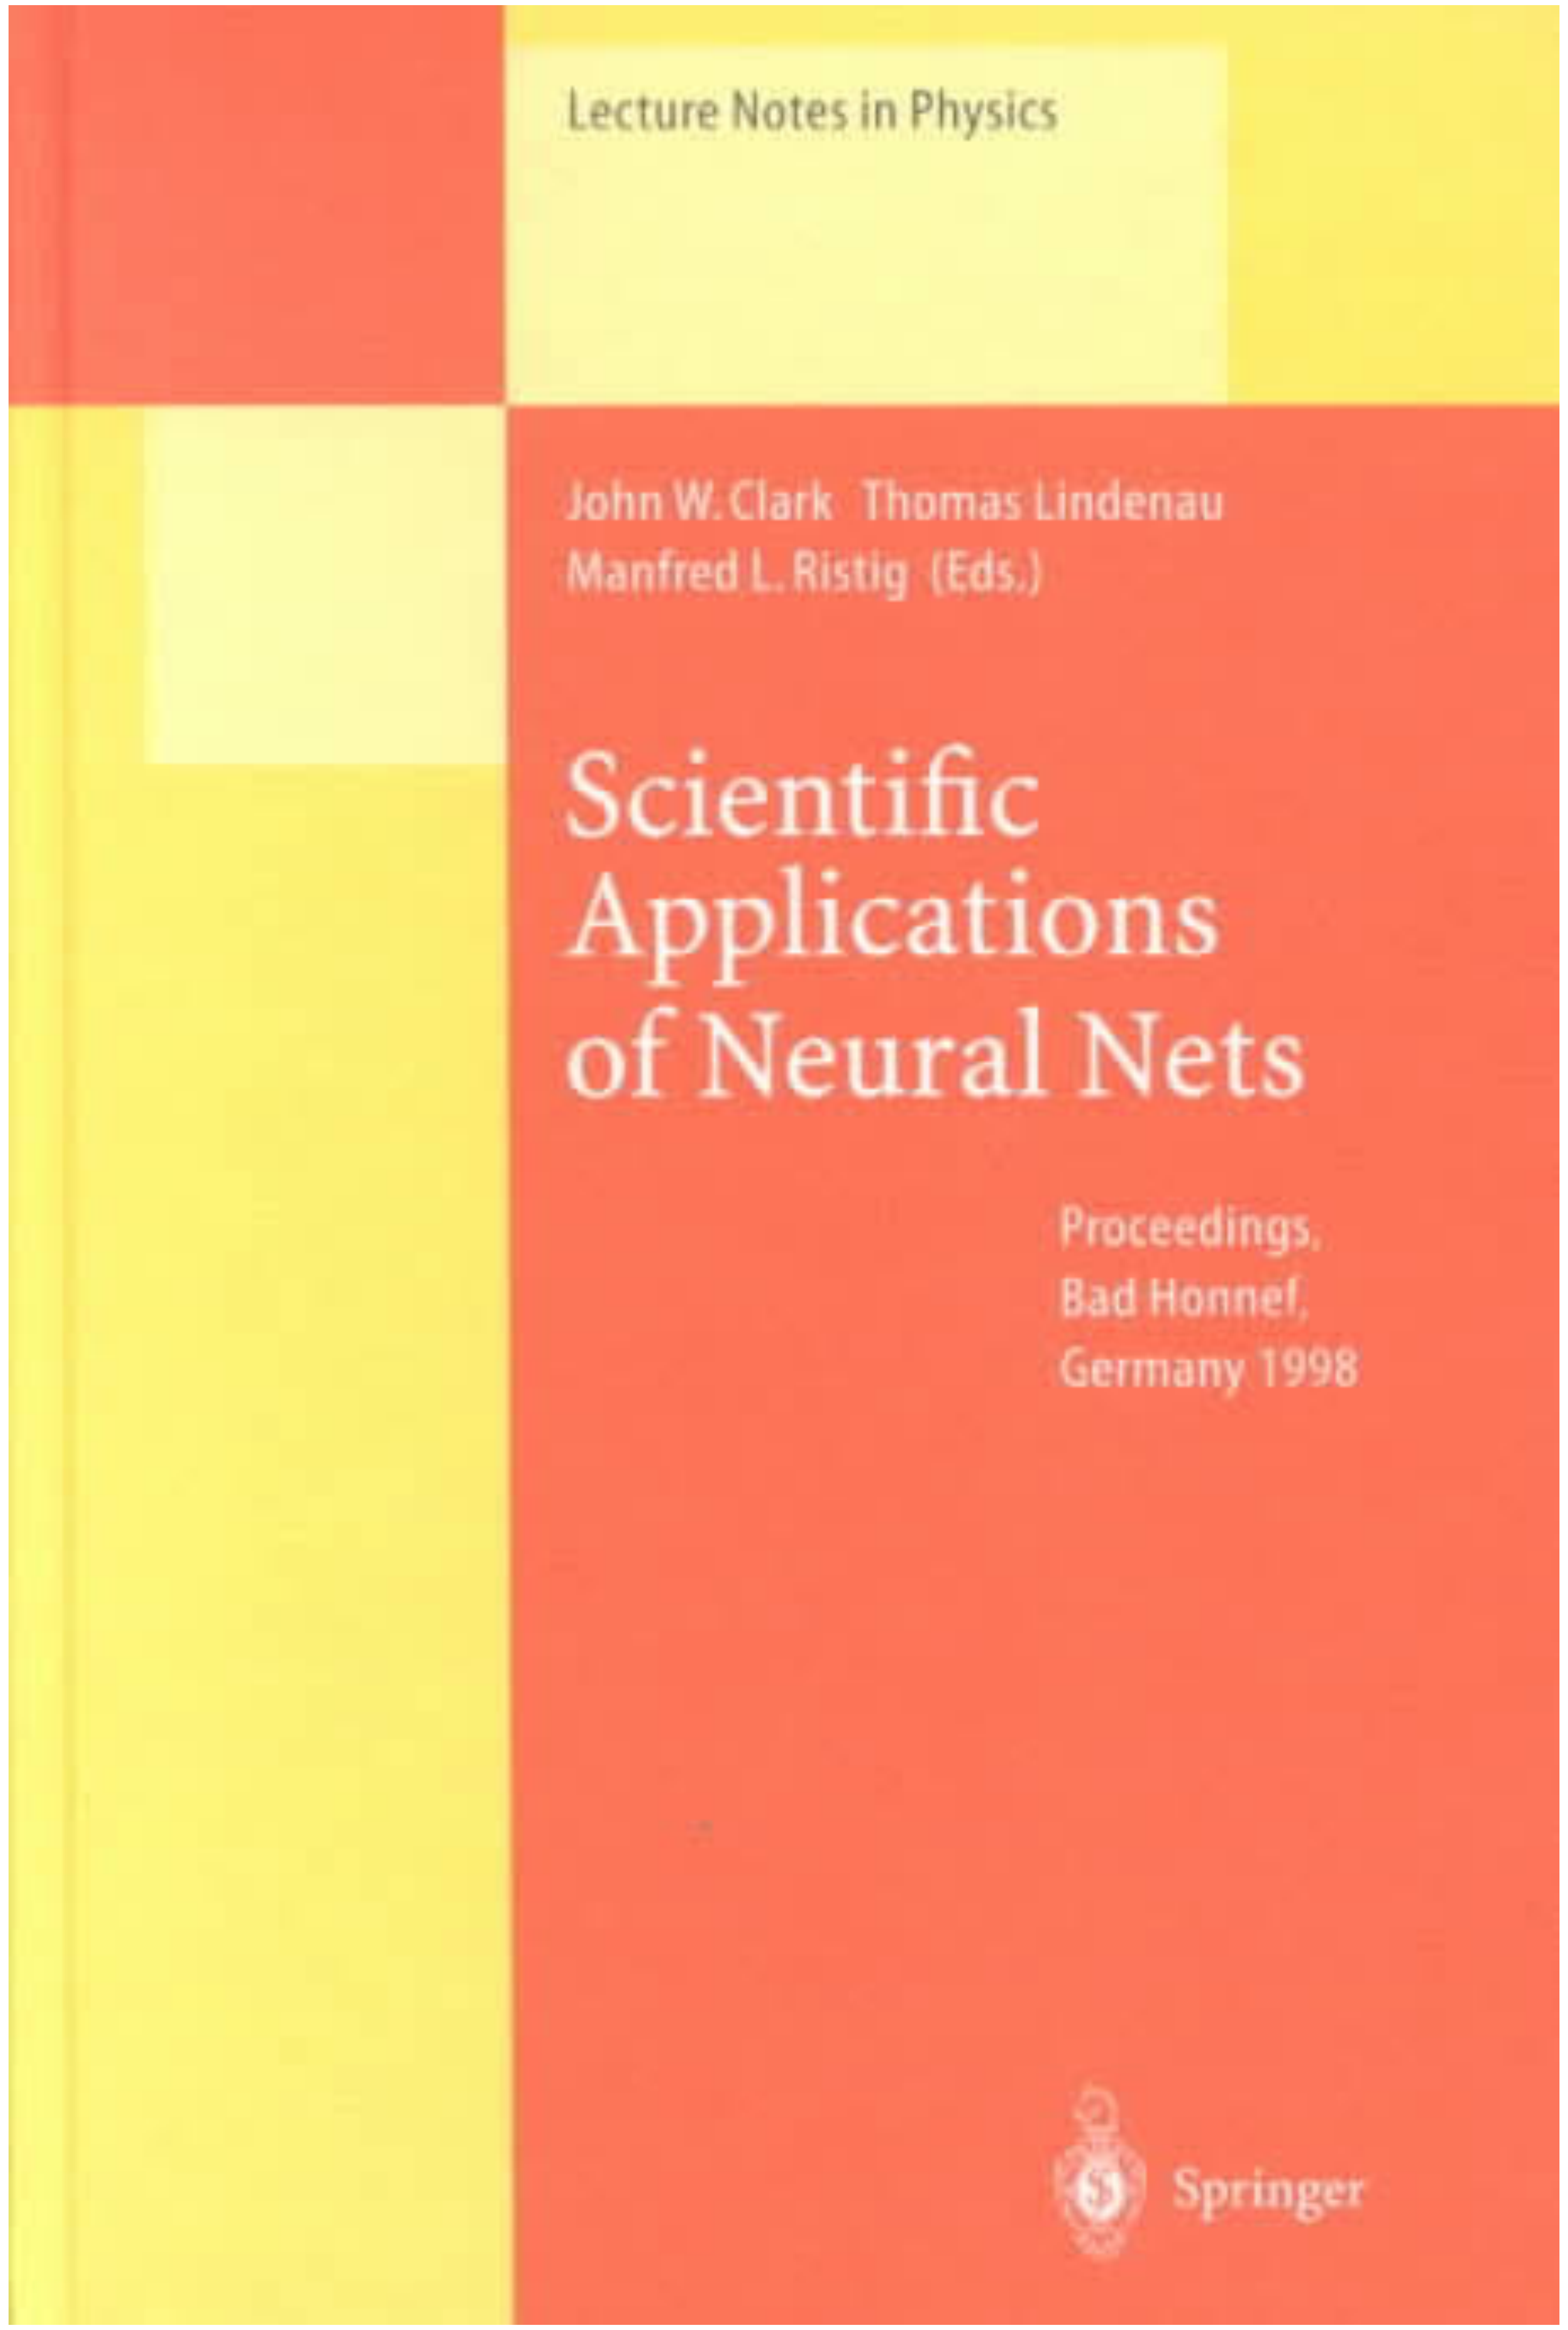
Why deep learning ?



Game changing technology for scientific research especially computational science

Gem in between this and last hype cycles



8 Doing Science With Neural Nets: Pride and Prejudice

When neural networks re-emerged on the scene in the mid-80s as a new and glamorous computational paradigm, the initial reaction in some sectors of the scientific community was perhaps too enthusiastic and not sufficiently critical. There was a tendency on the part of practitioners to oversell the powers of neural-network or "connectionist" solutions relative to conventional techniques – where conventional techniques can include both traditional theory-rich modeling and established statistical methods. The last five years have seen a correction phase, as some of the practical limitations of neural-network approaches have become apparent, and as scientists have become better acquainted with the wide array of advanced statistical tools that are currently available.

Why now, again ?

What has changed ?

What has not ?

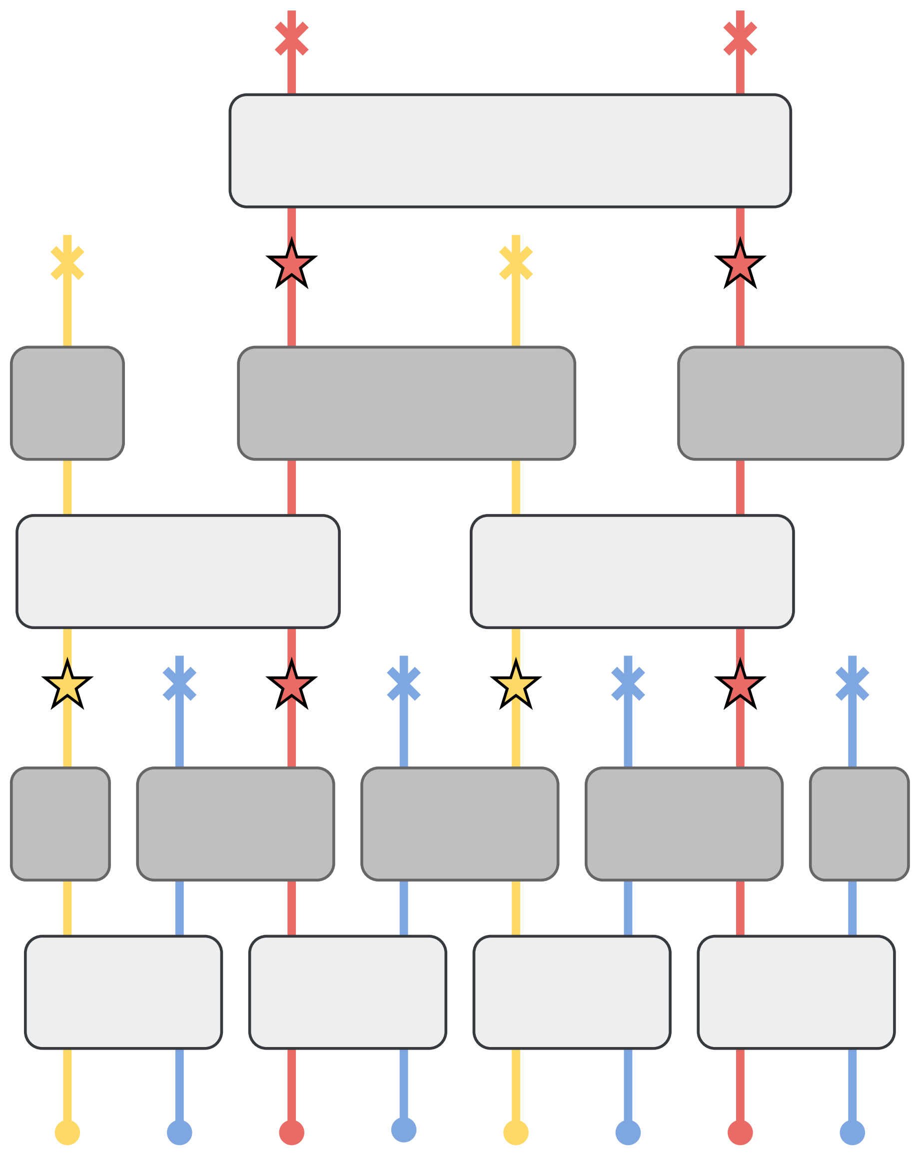
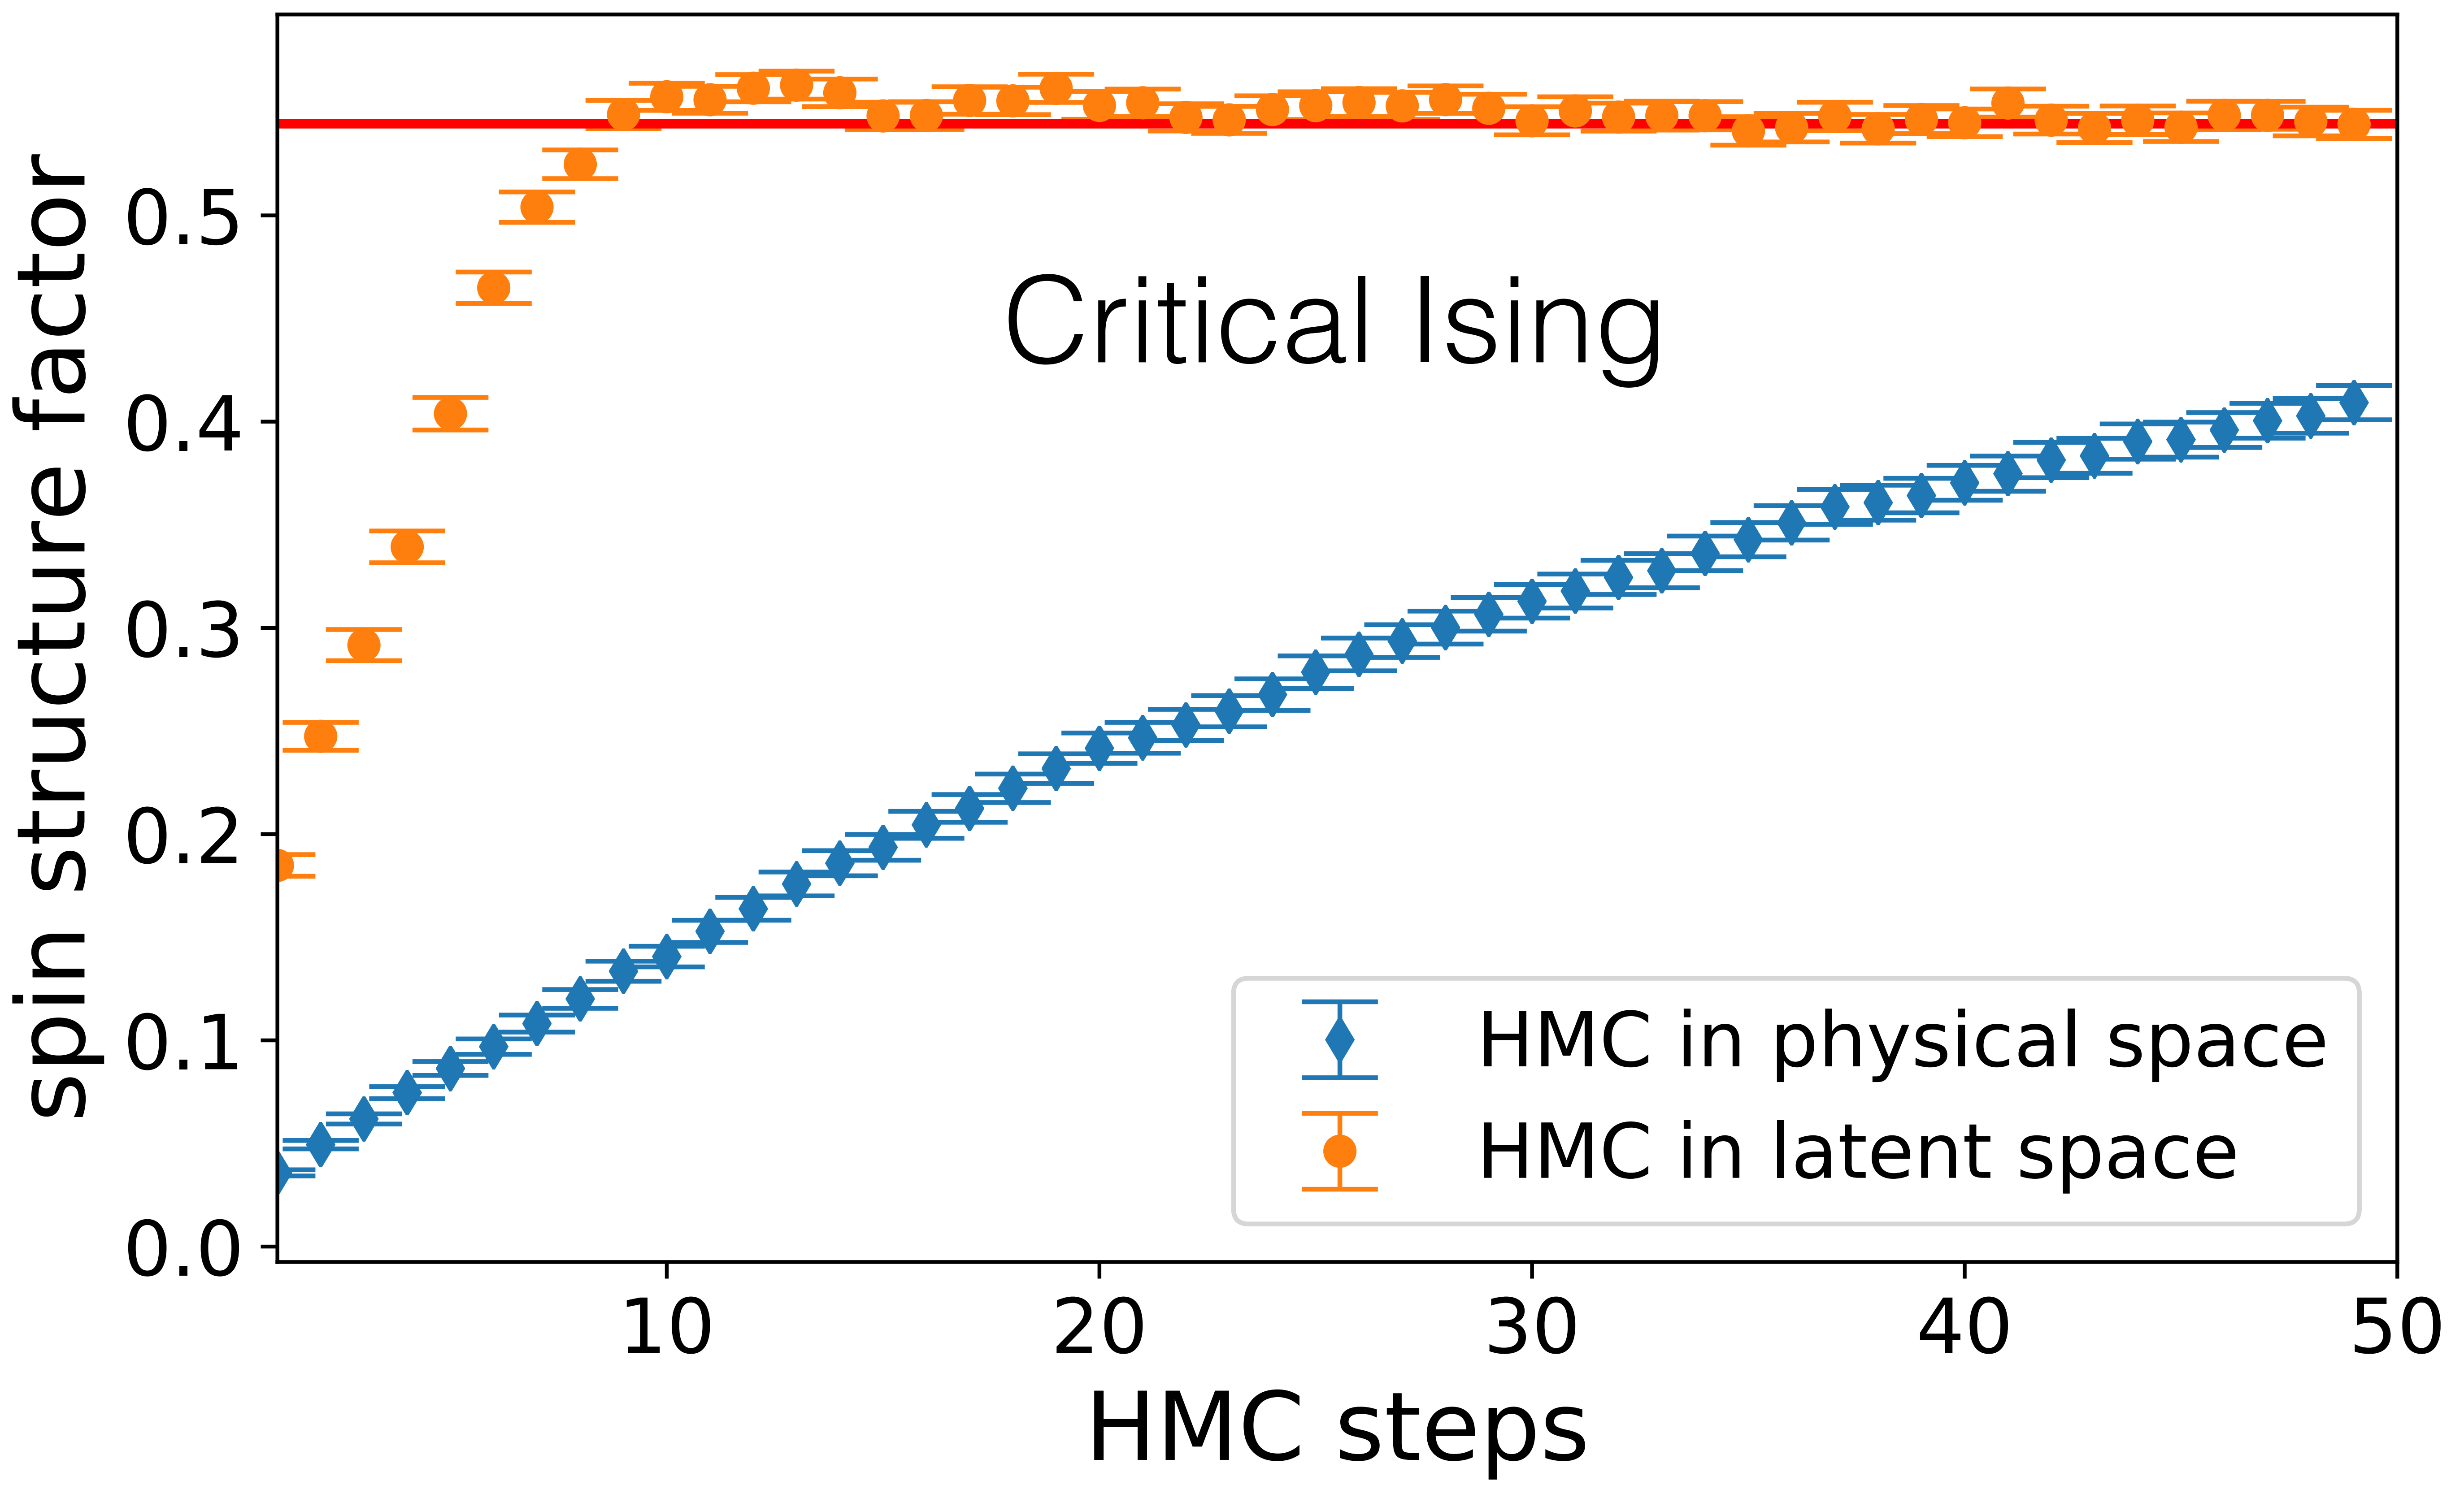
Latent space Hybrid MC

Latent space energy function

$$E_{\text{eff}}(z) = E(g(z)) + \ln q(g(z)) - \ln p(z)$$



Physical energy function $\boldsymbol{E(x)}$

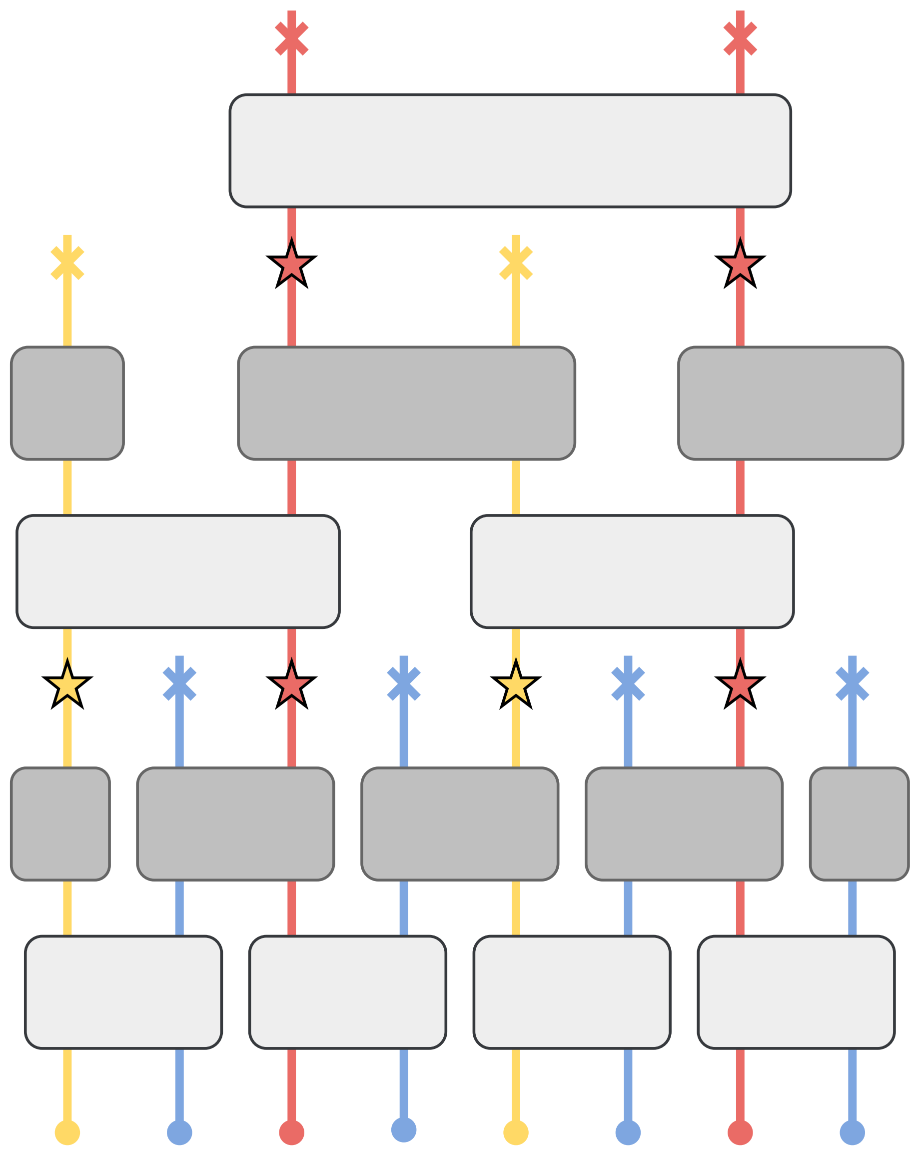


HMC thermalizes faster in the latent space

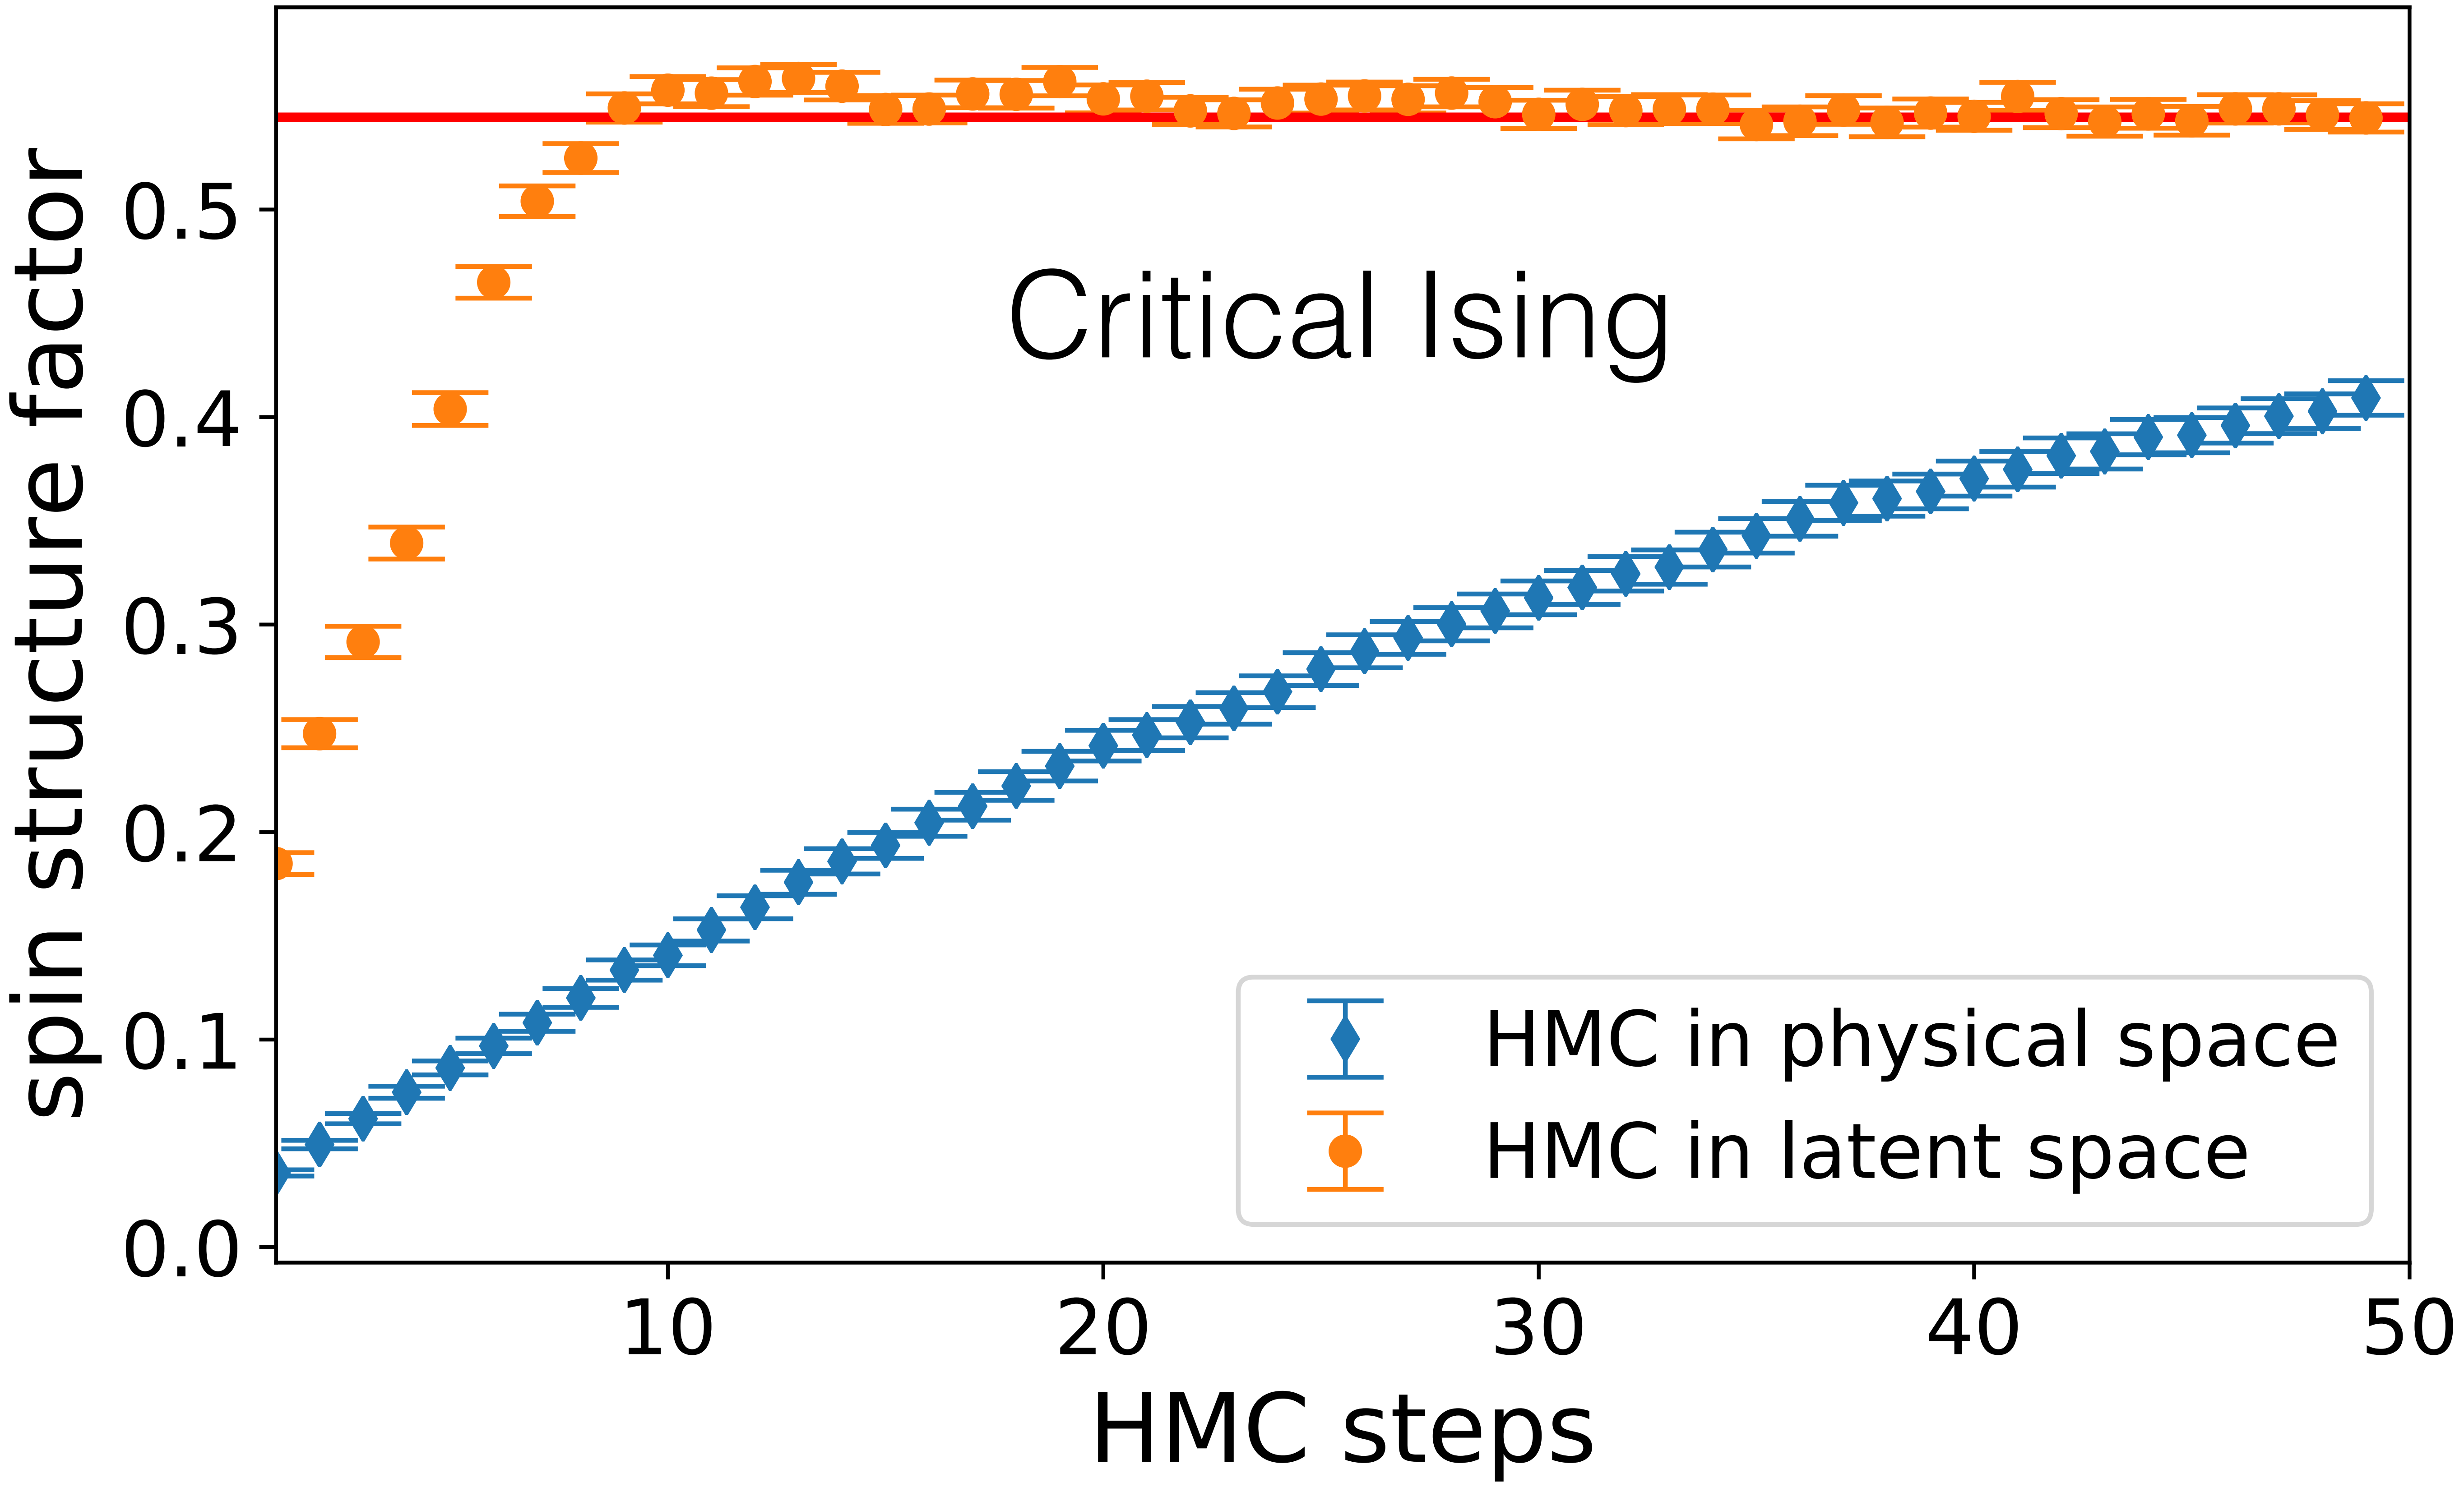
Latent space Hybrid MC

Latent space energy function

$$E_{\mathrm{eff}}(z) = E(g(z)) + \ln q(g(z)) - \ln p(z)$$



Physical energy function $E(\boldsymbol{x})$

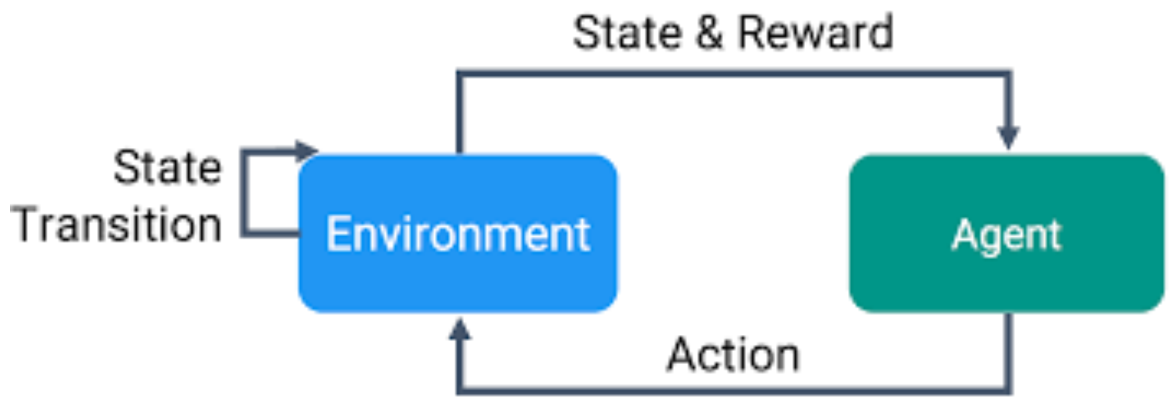


HMC thermalizes faster in the latent space

Remarks on accelerated MC

1. Cheap surrogate function for MC weight Neal 96' Jun. S Liu 01' A recommender engine for MC updates when the surrogate is a generative model: Huang, LW, 1610.02746, Liu, Qi, Meng, Fu, 1610.03137

2. Reinforcement learning the transition kernel: Song et al, 1706.07561, Levy et al 1711.09268, Cusumano-Towner et al 1801.03612, Bojesen, 1808.09095



3. Performs MC in the variationally learned disentangled representation: Wavelet MC, Ismail 03'

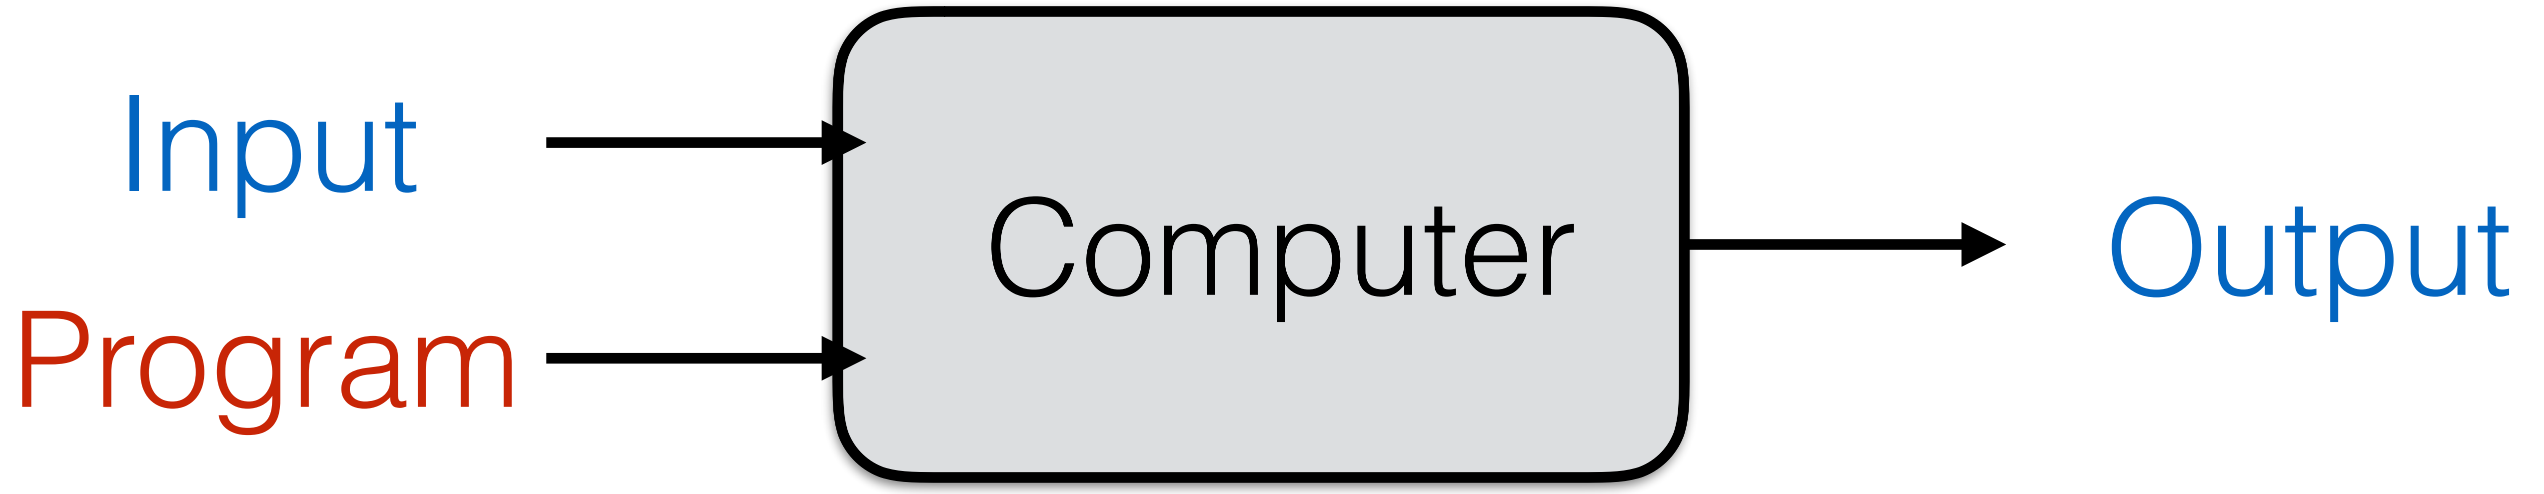
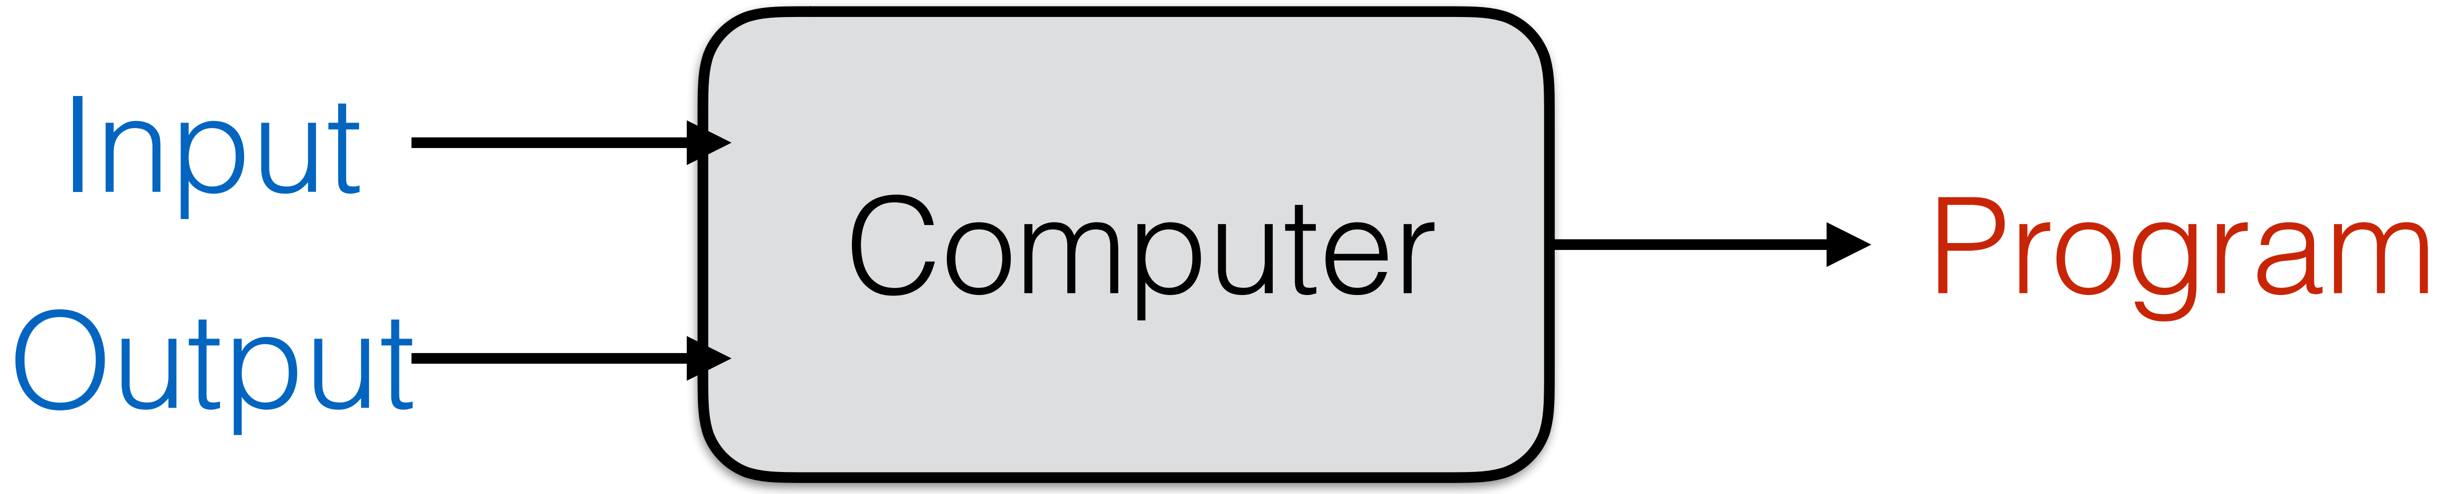
Differentiable Programming

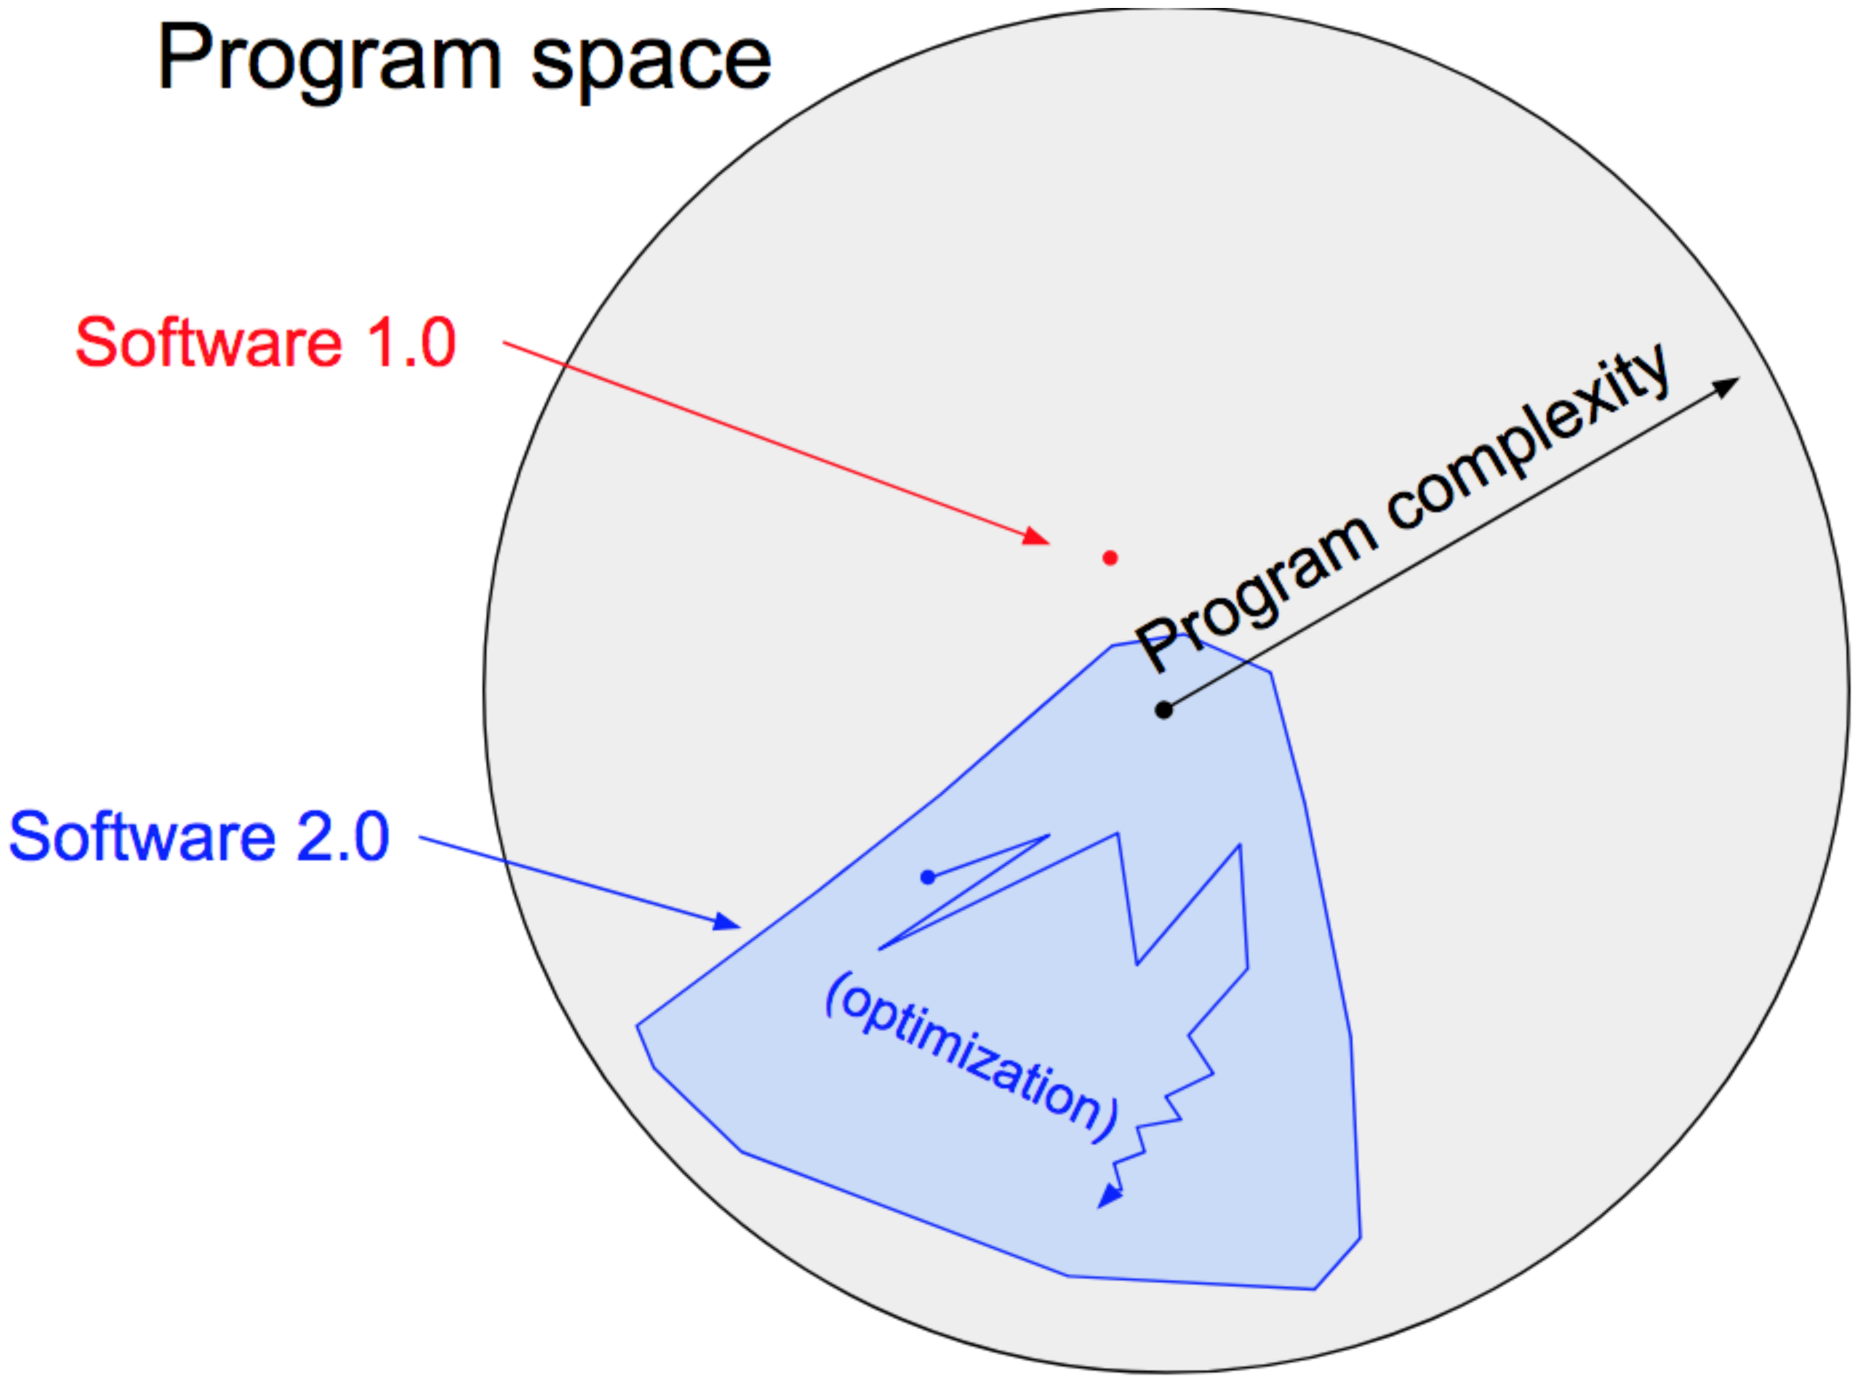




Andrej Karpathy

Director of AI at Tesla. Previously Research Scientist at OpenAI and PhD student at Stanford. I like to train deep neural nets on large datasets.

https://medium.com/@karpathy/software-2-0-a64152b37c35



Writing software 2.0 by searching in the program space

Differentiable Programming

Benefits compared to 1.0

- Computationally homogeneous
- Simple to bake into silicon
- Constant running time
- Constant memory usage
- Highly portable & agile
- Modules can meld into an optimal whole
- Better than humans
